Germany ... Wake up!

Germany. . . your power is mind indeed! Want to apply in the international Council -
then you recollect your glory -
Ours is the "light" - So be ready!
Be prepared - spun out of your swing -
sun far is your father's house!
Rejoicing rise into the sky,
calls from your home eternal world!
Germany ... your military is faithful and truth!
Create these weapons you schwertneu!
Do not be blinded by vile gold,
that you'll man's word 'hold back! - - -
From doing - what breaks your power,
Nordic waiver practice again!
Armann shalt thou be, according to God's Will '
listen in the Urd's eloquent silence '!
Away with all vain Lügentand,
in the depth of truth rests your pledge.
You bring this fairy tale treasure to day, then meet your fathers Say!
Harre believe the near fatal hour
because your mind is whether the globe round wins!
Nibelung loyalty and word Nibelung ...
Germany. Germany have your miracle shield!

John Baptist.

To the Reader!

Put this specification is not carelessly-doubt aside, think *twice* about, to *understand,* since Dei-NEM decide the fate of a *new* world depends on!

Your *"Yes!"*is the will of the whole - and Germany's future! This depends on the *individual* as do, for *single-ego* are the German people!

Your *"No!"*makes you complicit in *"coming days"!*

This writing is not as *technical* publication GE thought, and is emphasized in the introduction that all the technical aids for the evaluation of the *"great-power"* design is already available and the elemental force elements have been tested are experimental in their mode of action!

The present little work is therefore pursuing *not* the purpose of advertising, technical staff, which we as a *people* striving and "German" but are always welcome!The recording of *technical* details requires a profound study, and we will give you the opportunity to give scientific circles, is in a *"popular university for Dynamo technology"* information essential to where our words come to technical assistants.

With this document we are writing to all *thinking* people's and give them the opportunity, in cosmic interrelationships-to deepen.This is us, however, focuses on the *ethical* justification of our *demands* for establishment of a special purpose association *of major* proportions to secure the primal power and its effects!

All letters are to the central office to rich-ten!

Atlantis.

E swareinmal. . .

Once upon a time - - -

More than ten thousand years stretched between the continents of America and Europe, a continent of un-geheurer expansion, which was destroyed by a terrible natural disasters. Where now the waters of the Atlantic Ocean to the restless nature of her mastery of struggling humanity from becoming EMA song and sing passing everything earthly, is in the depths of the ocean buried a magnificent culture.

Atlantis, the fabled empire of us in every way far superior dawn of time, awaiting the hour of his elevation from the waters of Hades.For indeed - a self-created *hell* swallowed once in Urtagen the proud children of the ancient world, as they are in wicked than repealing measure it up to them in the spirit-hand given *"life force"* to abuse by All!For those times long ago faded whispers woman saga the story of the Un-Atlanteans tergang the ears of the sober current earth-dwellers and handed down the secret doctrine of the "knowing" miracle of skill of those blasphemous sons of God.

Once upon a time - - -

So then Hear the story of the destruction of a huge cultural center, which countless generations once been mother earth-giving in abundance! -

In the struggle for existence - in sorrow and joy!

The Atlanteans had conquered the all-natural completely. *Seers* had succeeded in the last act of the mysteries of the life-forces to see through.In deeper and deeper-penetrating

5

[6] and detecting the cosmic relations of the "beings" were finally up to the *"omnipotence* of natural forces" penetrated and was able to face these *primordial force* - technically evaluate - the *Vril!* The secret doctrine handed down to us today's real-people *nature* of the Vril

as the force which was obtained from the seed.

This is of course only be regarded as a paraphrase of the true facts! The present state of our knowledge, adapted, we should have as the *"life"* creating *original* or *vital electricity* appealing omnipotence Chen them!Vril was therefore a *"magical"* power, not to compare with the current in the technology serve us, the purely *physical* forces.The Atlanteans were *psycho-physical* dynamo technician and no mechano-machine operators, as we do.Their responsibility for the effects of the *"life energy"* was enormous, and especially in ethical and moral terms.Meanwhile, they are also thousands of years been conscious throughout, and they, led by its magical priest-king lived happily ever conceivable Tums.

The nature was subject to them completely.

When open to the "All-Mother Nature" faithful served and a moral - in constant support readiness people *all based* life led the - they sittli-che dignity and universal love of everything held up as long as, power front gives you the Vril as endless blessings of giving, inexhaustible creative universal energy.A paradise on earth was the children of Atlantis "home", - until they forgot their dignity and put the original power in the service of mutual destruction. Now all hell broke in upon the!

The Vril shook the foundations of the whole con-continent and might have destroyed the world when it was decided otherwise in the divine providence

6

[7] would be. Had dropped off since "Atlantis" and the world-sea poured into the resulting depths of the earth.

From their own hatred destroyed, plunged the whole, the universal spirit measure wanton creature into the jaws of death and the waves of the Atlantic Ocean, rushing towards the places of horror their EMA storm song from the *"dying and* becoming."

Once upon a time - - -

*

Amazed, we want the presence of people from the huge buildings of between Egyptian and Mexican past. The pyramids provoke the wonder of our technicians, and it seems incomprehensible, as the creators of this huge cult buildings was possible, piling up the house-sized blocks in tiers up to those heights following overwhelming. The blocks of hard-rock consisting Urge - are so seamlessly without the aid of a binder (mortar) matched that one can push filed in the interstices hardly a fine blade. We would be today, even with our continuing technology-paced, difficult in a position to master this *machine* Bauar cooperation.The same can be observed in the imposing religious buildings of the Mayas and Toltecs in Central America. Again and again encourages us this gigantic mechanical work performance of the indigenous people for thought and we can not reconcile ourselves with the fact that these preliminary-between their colossal market signs, as we have built temples, tombs and The like. Even today, in front of eyes, unaided *particular,* performed technical.

The assumption seems absurd that in the construction of the pyramids only simple lever and possibly Fla between trains reach the application, if the *gravity* of the building blocks we keep in mind us.Human power alone could not have been at work since. Here now the question arises, what kind of energy source those

7.

[8] architect was subservient. According to the result-sen modern historical research, we need to discuss Egypt and Old Mexican-ter than the most ancient guardian of knowledge, which had based its findings from the Early Atlantic. The priests of that ancient civilizations could magician apparently the Vril master still technically and guarded its secret as the descendants of the lost Atlanteans.

It may exist for these clarifications no doubt that the ancient Egyptians, Mayans, Incas, and Toltecs in Central America have enormous powers-ten in order to transport huge stones, and even whole rocks from far away and piling up in their religious buildings. Captain Campbell has Bosloy in 1913 a research trip undertaken by Peru and found there - for example, to mention just one - a stone that weighed about *3000 tons* and obvious from a distance-induced done been had.This stone was carefully prepared, trimmed and cut and clearly pointed out that dagewe to its processing must be sen-technical facilities, our today's rock saws to job performance far exceeded. Needless to say at this point everything! There is an extensive literature in this regard, be seen in which one is closer. We refer to *Scott-Elliot,* whose journal "Atlantis" provides more detailed data.*Wachtel* also wrote *Karl Born* and *Karl Georg Zschaetzsch* two books with the same title.Particularly, we refer here to the end of the known health-taught Herman *Wirth* - Marburg, in the Atlantisfor research has made very commendable of himself.

*

And once again, years, a time cycle of ten-thousand *unit* closed for!The secrets of the faded

8.

[9] Atlantis period awaiting their unveiling. The bottom of the Atlantic Ocean begins at many-active sites to increase slowly, which was a deep-sea research-identified perfectly. At the beginning of 1930, went through the daily press, a report on London, we would like to quote here verbatim:

"Old city ruins up on a submerged island in the ocean! London, 28 December 1929.

One of New York reported that three of them from the U.S. Navy Department sent out door-pedobootzerstörer found the rumor confirmed that in the vicinity of one of the Bahama group, the island of New Providence by submarine earthquakes, a new island has formed. On the island, which is found on any lake cards, there are ruins of an ancient city that must have had a large number of inhabitants and has probably existed even before the discovery of America. It is now a scientific expedition prepared to investigate these ruins. "

For this purpose, the following is noted:

This Bahamian islands are the Florida peninsula before-mounted - in the area of the Gulf of *Mexico.*According to ancient esoteric traditions, we have therefore superior Neuland (Hochland!) the sunken Atlantis in mind. The Canary Islands have also raised the sunken continent as are *mountain peaks.*Coming years are the people most certainly before the fact of new exercises. It remains to be seen what will the science on this uplift areas of new knowledge. In any event, it is noticed here that the newspaper report mentioned in the island houses a cultural center, which must have existed well before the discovery of America. Perhaps she is even from the Atlantic prehistory. But here is the research not be anticipated. It has already

9

[10] said that we have apparently a lot of exten-sive uplift to the present, which should enable the world in great astonishment.

A new culture cycle will begin!

Achievements of the human spirit from the distant past should again become the common property of the present. The Vrilkraft is recovered, the Emerald Tablets of Hermes Trismegistus large emit blue-green light dawning morning uranidischer Naturbeherr research, - and, subsequently, the attempt unternom men, arouse the interest of broad masses of the cosmic University salenergie.

The technology of the Atlanteans Dynamo awaits its built-ens in the German people as a whole!

10

11.

Weltdynamismus.

Currently many minds exciting news that a small group should be managed by knowing-research-humans, to solve a problem that seems to be suitable in its impact, socially and ethically to forge a happier era led us to this momentous matter in the German public spheres to express their views. As a preliminary remark, that the whole complex of questions must first be addressed from a purely intellectual scientific point of view, since we lack, unfortunately for the time being in issue problem as well as all empirical experience base. It is the semi-pointed out that the empirical physics and their representatives, unfortunately, as assessed the relevance and possibility of implementing our programs completely new idea may well not come into question. This is not an attack against the well to be taken serious-determining, importance in force-ten standing science of physics. Once there, however, as already noted with is a new feature, which is almost devoid of any foundation of experience, the physics must reject this, or at least behave cautiously forward, waiting.

It should now be gone because the problem of exploitation and utilization of the so-called ª *"Vita-Lener energy"* from a purely humanistic point of view to reveal from.Let's start first with ancient religious ideas and esoteric exhibitions of ancient Indian culture circle!

In the Vedantalehre, the Upanishads - the holy books of the ancient Indians - we find a primary source oldest Menschenweistums. Let us first consider the *Du-alsetzung* the eternally destructive and constructive Weltprin-zips

* For *Shiva* can as Christian religious symbol "Holy Spirit" (Logos!) - For *Vishnu,* as "Einfleischungsprinzip", the Logos incarnate "Christ" will be set!11

[12] ancient Indian religious idea of *Shiva,* the all-dissolving, dispersing space, and *Vishnu,* the merciful love, always *binding* principle of creation and continuous development will!*) In Shiva we see the timeless free radiation of an elemental force indifferent in itself, just the already mentioned vital energy. This radiation is the *Urgrundlage* of life, because *life* is possible only through constant motion.The *radiation center* is everywhere and nowhere to look, because the room is only *as* consequences of the principle of Shiva think.*The* PPP Shiva has always *outside,* rather, caused by the *free* space, as pure spirit power understood to be spaceless.Where any of the free radiation resistance is set, immediately creates a *relative* radiation center.Thus, the *absolute* center of radiation consisting Shiva-men are assumed to nowhere.Which is free of radiation Shiva appears as vital energy *only* in the appearance, and is thus empirically *only* easily documented and evaluated - if a brake-resistance - a resistance torque - anywhere and any-set as it appears.

This braking resistance arises in the binding principle of *Vishnu.*

Viewed from the *dynamic* side of Vishnu is thus to design creative design, from the *ethical* standpoint, we need him first principle of the binding "universal love" the same values.We have these conflicting and competing but wonderful he necessarily be two-Entirely original motives of the world becoming the Kreuzsym-bol originally set. The vertical rods longitudinal "bar" represents timeless-free radiation - Siva!The horizontal cross-beams, "limit", thus in-the-appearance-representation

12

[13] of the building creative love motif - Vishnu!

In the creative *phenomenon* occurs in the *center* - the intersection of the two beams.*There* is even the aforementioned "resistor", which is indifferent to the space radiation, "Shiva" only looking, creative constructive force formed in, just reality!(In all material benefits such as powerful magnets, etc. *indifference!)*

Such appears to be *relatively* a radiation center was born.Consequently cross symbol is a simple sign at the same time constant *positive* construction!not-necessary complement absolute terms, "unshielded" and "-binding" - "Unlimited" and "Limited" - "not because the end - Timeless" and "Because end - temporal," - the Welter distinction planning always *"dissolving wool end"* and the

phenomenal world always *"creative-binding"* - - very: *Shiva and Vishnu* creative power *unit for! Positive* is the world only through the love bond Vishnu.

We will now try to create the dynamism of the material world clarity. In the ancient Indian Vedenlehre we are told of a basically free, always-lumbar verstrah "pranic primal power." *"Prana"* is therefore judged from a purely *dynamic* point of view with the religious symbol shiva equated.What the *religious* imagination of the ancient Indians of us have in due course makes interpretation is esoteric of the Vedas, the Upanishads, the *dynamic between* metaphysical point of view in the lit.

And this "Prana" is simply a primal force, even *the* original itself, with which the empirical physics education and experience do nothing right to begin down to earth force.Here, it lacks any empirical *fact that* can be developed scientifically-humanities purely only!

To nuclear physics, the science of experience has already won through! Further, the empirical can the provisional

13.

[14] does *not* go.We *know* already that the whole phenomenon occurred in the *"matter"* is actually not available!Force and vibration force fields around us make the purely material world meaningful picture. If we matter "exercise," we first have to first be clear to us that this perception by the *"binding"* a fundamental force acting *against pin* is necessarily-be.Positive and negative bonds (anions and cations) as the two components of that elemental force nearly vibration-gene level ground conditions with light-speed.

So you can light, the oscillation rhythm to be identified. It also speaks in the relatively speculative physicists of *"congealed light"* and turns the material world as a strictly legitimate child - the APPEARS *"Light Experience"* in front!

Free radiation, "Siva-prana" *tied* to the creative laws of Vishnu, created just the material world-the headlight!The intuitive working the old Indians, however, went somewhat further than our scientific empiricism riophysiker. *Prana,* radiation-free, was indifferent to them at the *primal force* of the entire phenomenal world.We also have the *Vril* the Atlanteans in mind!

The atomic world of modern physics of relativity is a primary recognition after the Indian world, *"Ur-atoms"* is based on.The presence of the physicist is already suspected. For the present we know almost nothing about the *nature* of the so-called atomic *nuclei* (protons) that the bound electron to oscillate, GE says better *margins.*These monads are indifferent but the radiation centers - "Shiva" - in primary education Kraftraumbin-- "Vishnu" - and the negative symbol - active, to be truly creative with the-absorbent and exciting feature! *We,* the material world is the formative atomic structure after a negative-charged positive!In the Bohr atom model, we look for the intuitive insight of the re-searchers,

14

[15] that the electron oscillations, he closed off by a clock spring exciting, aspiring to the outside, achieved thus far. Not attractive force (Anziehung!), but *ex* tension (bracing) is the material creation in their atomic units already based.Shiva here! And Shiva-Vishnu Prana is bound by creative love. The primary problem of creation itself!

Prana, the absolute, free power, the basis of the creative dynamism has not yet found the empirical physics to hay-te. This Prana, the Vril, the elemental force, identified with *space power,* but already enlightened the minds of many unsuspecting physicist.The pranic radiation dynamism should now be possible from the standpoint of illuminated cherweise be shortly entering practical use in processing.

Mankind must spiritualize and slowly approach the symbol of the creative-free radiant, loving gods Shiva-Vishnu unit. Since we want to draw before-once on gray dawn of human development, from which we have no historical lore. Here we can again only be a secret science leader impassable Intellektpfaden! This knowledge is *a* seeing, it detects the World Health Schehen not *intuitive,* intellectually!The precipitate of the "Knowing-looking 'we can then teach the secret to undergo a screening.

As is variously reported, that the home on earth rational beings from time immemorial had tremendous insight into the laws of nature and nature was able to master quite differently, as we present "Crown of Creation". However, these primordial just looking and not intellectual people! Lemurien, the Atlantis - are those fabulous cultural sites. There was the domination of nature by humanity living there a magical level achieved. Of the Atlanteans we are told that they *Vrilkraft*

15

have [16] and mastered it from those we bin dividends laws of nature actually completely independent, made gig. You are almighty gods in our eyes! But we are further reports that one day this power selfishly abused and put at the service of human destruction, which they delivered up in the impact of self-destruction.

A portent for our times!

But it is ominous that the Atlanteans Vrilkraft other than the current development in our culture now also becoming *space force!*And here we are introduced to us of existing *scientific* side of our problem and deal with - as far as possible to the soil physical shearing experience being based on facts - the concept of force build-up area.

16
17

Mechanotechnik and bio-dynamic.

The current modern machine technology, mechanistic-based. We want to try this a little klarzuma chen.

We have engines, which respond only to me mechanical shock or pressure forces. Either the pure shock-and-pressure directly converted into rotation-sets, as in the water and wind turbines, engines, or else it will initially brought some fuel in another state, like the steam engines and internal combustion engines. In the first case is when the energy gieverwertung molecular confinement *without* much power lost much, but the second is by exempting the fuel molecules have more energy released.This released binding force (cohesiveness) is converted again into the purely mechanical torque. For the generation of electricity ity, we need again the Dynamo a mechanical rotation. At best, therefore, come at Energieumset pollution in today's technology only power deliveries of the substance in the form of molecular relaxations (reversals of conditions) in question.

In contrast, however, in which the doors of our future-pounding dynamism, and then be justified dividends dynamic technology.

Here let us first be clear only on the following fundamental.

The false-matter of our experienced world is built on a *triad* of.Electron-nuclear forces shape structure, atomic structure and molecular associations that the specific materiality of the phenomenal world. So, *atom, molecule,*

17

[18] *material!*The present technique used to produce energy only from the substance or the liberated molecular force and sets the energy released by mechanically rotating. In the *atom* is the secret of the Dy-namismus and the dynamic technology hidden.Now we will try to provide further clarity about the nature of the dynamic nuclear construction.

The atom is, as already explained, a great-power conflict. Let us first nor of the molecular plane of the fabric and see us, as it is here on energy deliveries, may therefore force effects!

We change the physical state of a substance, we transform such ;Liquid water in "gaseous vapor", "according to *a* release occurs because surge *molecular* bonds, and the force is released.So here is energy by *developing* stress of a material Ren-born molecular structure.*Development* we stretch the molecular bond-tions of carbon *chemically* (Verbrennung!), then energy in the form of heat

is released, etc.Now, however, this stress state of a substance for the purpose of energy recovery planning, *by* high voltage, ie pressure, are also produced artificially.Is compressed by air pressure (Lin-de-Verfahren!), it is only *liquid,* then *even* found.Leaves after the artificial pressure, this compressed air again exposed to normal environmental stress, they wan so-Delt from the solid to liquid and then back into the gaseous state. gang are adjacent to the turn-over energy is released, since the relaxed molecular molecular structure.

So you can all gases - carbon dioxide, etc. - artificial tension, *to* compress, and then *developed* tension, for strength to get free.Now is *any* substance in its molecular bonds have a certain voltage and calibrated.The molecular structure loosened too much, so the solid form of a substance in any

18

[19], a gaseous transferred and the sensuous appearance of the specific substance is gone. We see every technique works properly only with the Nutzef-fect of different voltage adjustments.

And this is the problem of the problems of the space force evaluation - from pure *dynamism* - a!

the world from the *neutral* radiation pressure, "Shiva" and the creative love of loyalty, "Vishnu" to the original forms of atoms of specific elements of our *coagulated* as - and in the *differentiation* of different vibrational and Bonding (Logos-Aggregation!)the material world was created, each element of atomic force his mark under certain voltage and pressure conditions has received. Thus, in hydrogen, helium and radium atom the tension of the bound electron-defined and the respective printing processes of the environment holds for them in those distant days of creation have been adjusted. Due to the different physical states through de-the material world is going to come up slowly over time.

Now happening but now the case that our matter (Earth) appears again in increasing environmental pressure conditions (Spannungen!) gets into it, because elements that are commonly referred to as radioactive begin this occurring environmental *pressure* (Überspannung!)to decompose naturally into the basic pranic force. One can visually by a "Aging" to speak of matter. The matter-death occurs, the bound-Dene primal power is free, therefore, radiant, which also interpreted only as a transformation to higher power levels will be the must, just as physical death of the bound stoffli-chen people even Freiwerdung intellectual Men -specific intellectual means to a freer life.

If we increase the pressure of the environment per reference think having the older elements of matter, extending it makes us the grand picture of a radiation-lend

19

[20] becoming imagine creation in the mind. Basically we have only thought Chen as its own ma-that the oldest elements were concentrated among the most environ-mental pressure (voltage) and consequently also in the atomic structure of protons to the bond exchange, the lowest electron voltages (atomic weight - as a suction, or cohesion of Protonvakuas !) must have. The problem of becoming radiant matter, as we can determine empirically when the radioactive substances, has us completely new knowledge.

The future of science is concerned today with the thought of exploding nuclear organizations to get the-art electron energies free. Again, the dynamism is coming. To make an atom breaking, would have the technology tremendous energy bids to stand, since - as already noted several times, electrons of voltages with approximately the *speed of light (light force)* to the nucleus are bound.This way he appears so far only theoretically feasible, since the human race do not have the enormous electrical charges has. It is also completely ruled out that such a nuclear power in the art can be made practically useful recyclable. If it proves our engineers yet, the huge La-binding energies have to be on hand to magnetic fields caused by electrical induction (Gaußaufladung!) to blow the material to excite atoms to, then the *efficiency* would be zero, and would the resulting free electrons forces only cause unimaginable destruction.

The *second* way to get free nuclear energy, in which the problem is not energy (caused *by* stress-magnetic fields), but *static* - the *lower* voltage Protonvakuen is managed by single-minded will, our physicists currently still impassable.And yet here is the only way to see to make primal power-nutz bringing recyclable.

20

[21] And again, it is the humanities, which are the greatest teacher of all time, *nature* itself, points to.Why work with light-explosive energy, where we learn from nature, that a simple Change in matters of environmental pressure yielding positive results? C The Energetic If radioactive substances!), *Non-voltage-nuclear* structures (pressure), *but material change in environmental pressure* and the resulting *lower* voltage Protonvakuen (break strength of material indifference in vacuum) is the slogan of heraufdäm-pearance dynamism.The nuclear decay of radioactive elements-te shows us the *new* track!

Now we wonder at how such an environ-mental pressure change could achieve practical! Will we mostly natural conditions, we get to the installation of a relative space vacuum, a matter-free cavity in the force units of the dynamic tech-nology. An absolute vacuum is not imaginable, because every matter-free space force met (cocked) who has presented-the. The radiation-free, "Shiva" permeates every vacuum, so we can speak of an absolute space only in terms of material. Now we go to our dynamic conceptualization *ball cell,* which is a "synthetic earth" can be described as.Our Mother Earth is in fact such a space power unit in the large. Let us imagine the world placed within the power vacuum of space, then our sample space the engine is in front of your eyes!

The space is of indifferent free radiation (negative activity) meets energy. Pranic energy radiation flooded over and over, and brace will be tied again. At the boundaries of our physical globe (including its atmosphere!) we have practically the environ-mental change in pressure. There, the atomic structure of the oldest and lightest of all elements of hydrogen and helium, released all the time because the relative vacuum of space

21

[22] as an environmental pressure the electron voltages of all elements no longer holds the balance and primal power units are unshielded.

The Hörbigersche Welteistheorie speaks of the "heating" of the sun through *"ice"* (Hydrogen in energetic form!), So claims may be that the sun was the host of-sen guests (the planets and moons in the solar system) their bill in the form hydrogen (Welteis) must be paid by (entropy).From space-vacuum inside the earth with cosmic energy (solar radiation, electro-magnetic waves!), constantly enriched. In the atom-given birth negative *active* Indifferentialzone of world-vacuum transformation space power as global and *specific* ground-force with a different new-born (entropy) and floods than we already familiar to Universal Energy, "vital power" (like light) to the earth south pole (cathode-us) back. - The active given birth radiating *negative* ions (cations) of hydrogen are used as factors in the free space radiation indifferent to *new* power centers - a negative force-paired spheroids symbolic. (Schiwa-Wischnu!) - and so primordial atoms, negative activity, regenerates constantly.

The "dynamic Perpetuum mobile" - mechanically, it was not possible!

In this way the universal all-power radiation (voltage) and binding (pull) is always completely negative-active effect and creates the material world. The negative Kräftepol (negative activity) as exciting electrons in the *bipolar* attachment of the substance is only *apparent* in the 'atomistic bond "as a *secondary* matter-block before-hand and need only as a complementary dynamic order-tension of the aspirated primordial atom-vacuum (nucleus are addressed).The Ur-omnipotence is always in their nega-tive activity beaming effect (Schiwa!). We have a full relaxation of the atomic structure of all - to expect our fuel bill world formative elements

22

[23], which runs through the big time in *variable* environmental pressures of the duality of the creative God created and set atomic structure of voltages be-necessarily appear from.Therefore decompose those elements, which means the physics as radioactive - in liberated elemental force. "As above - so below!" The great initiates Hermes Trismegistus reserves rather timeless.

An environmental pressure change is here, the matter resolves itself in the specific elements and is an active force - brilliant! Can be expected to make up our appearance matter world are essential to the substances. Circuit converts everything to radiant energy and the material world is *then dissolved.*

The dynamo-technical primal force elements.

Now we come to explain the technique of dynamic power units!

"A world in miniature" - this was already suggested by us! - -

How this problem could be solved technically? - Analog Up!

Will we make it *down* a relative vacuum!According to our findings, a fuel made Hohlku empty gel (Magdeburg ball!) Is last of the air pressure sionally an exciting acts, not *pressed* against each other, but the function of the vacuum draws the two matched gelhälften Ku-together - in other words, each vacuum limitation is its material over suction!We then speak of the *cohesive force.*Apparently, that is, designating difficult to understand, but rather - very rich-TIG! And here we are again back to the secret of the atomic nucleus!

The Greek philosopher *Democritus,* he was in deep nature of existing relationships take many years ago, 100 years, the essence of every virtue material basis - in its original form, the atom - completely correctly recognized.The word atom describes the concept of a "self-important speed." Democritus says:

"Everything comes only from existing and beginning to catch on substances is an *atom* (own essence).This atom is the Alpha and Omega, the beginning and end of the world stoffli-chen and bound *elemental force* (compressed electricity).An atom is a *"dense*

24

[25] *entity, "the* room is *empty,* and this being a dictator *over* all forces must be known *in* space!"

In the proton (nucleus) we shall therefore a vital-force of electrically charged space in mind, which, as the negative *vacuo* Elektronenumspannung (atmosphere of the atom) to suction does *absolute.*This is the *concentric* force acting component of the univer-sal primal force, as we have by virtue of their material Massenäu-ßerung as *gravity* (gravity) in mind is back.The negative is the *exten-sive* Elektronenumspannung directed force component (centrifugal force) is!She has the desire to irradiate (vital power) and represent us-life the concept of *negative activity.*These two force components - concentration and extension - are located in the well-balanced dynamic balancing, whereby the binding force of this duality is possible for material physical appearance. We have to see in the material atom a Stüler pung-macrocosmic relationships.

The *macro-cosmic* vacuum works, how many times mentioned, negative-active - the powerful material Bal-lung (planets, stars) compared to - suction - resolution sen-sympathetic!In the macrocosmic vacuole is therefore *the* State of the atom (the negative activity, elec-tronenspannung!)*inside.*Here we refer to the pre-versions in the section entitled "Weltdynamismus" over the prob-lem Shiva-Vishnu. Vishnu sits down in limiting power centers, power world, a microcosm in the makrokosmi-tion *material* (non-positive material) indigenous!In the Makrovakuole is material bipolarity, with its binding function, "negative-positive" does not exist and yet we can force acting double component *suction* (train - concentration - Binding: Vishnu) and *voltage* (pressure - Extension - radiation: Shiva) here in efficacy seen.*Energy-space* (space power)

25

[26] based prevails in the world dynamics always the non-polar (exciting) efforts of the creative primal power, the only *vital* distribution (Shiva) is.*Material strength* (force-space) is considered, the World dynamics but in bipolar function (Vishnu) binding *energy,* ie fuel bill sheep-Fend.Is always negative activity in the basic units of matter (atmospheric lashing) the primary fac-tor, which allows

each physical manifestation of life. Without an atmosphere (negative activity) is a physical basis at all possible.

The atom has its *negative activity,* the biological cell as a basic unit of life also in the globe it occurs to us in the form of the atmosphere in mind, in the solar system we must by outermost planets limited thinking to us, in a central solar system - as the order voltage of all associated solar systems - and so on until we finally got to the conclusion the whole space, "negative-active" meets vital creative energy to work-see.Once here, us the universe appears to be a back breathing through all the specific atmosphere lively schöpferi-tion unit.

In the breast of the "energetic All-God" rests the whole of creation. This macro cosmos breathes in itself, its atmosphere is in the LRT hall, with which he is identified ja-table - decided. He *has* no "negative activity" - but is the *cause* (the essence!)this schöpferi-'principle dar. The micro-cosmic force of creation material units (atoms, cells, cell states, planets, solar systems, central solar systems, etc.) to breathe *through* the creative macrocosm.We have here the Stülpungs process made this abundantly clear. Only through this arrangement, the highest wisdom physical life is possible. The forces - attraction - Ex-tension - in the weight room are completely identical and thus there is in our opinion, the bipolarity of the matter really just a *quasi* (same same) double-pole speed.

26

[27] This is the secret of the material world, in the binding set, by itself unified, creative, divine power!

("Negative activity" indifference)

Terms of numbers, words, one is 2 and 2 is just one thing!

Perhaps the reader to the advance of this guidance deepest mystery is now but a little understandable Lich. Shiva is Vishnu and Vishnu is Shiva. This reasoning was the *dualistic* Monomismus, the basis of any magic, a dynamic subject.This dualistic Monomismus-tion is a challenge in the physical world for the last few mystery of the *Trinity.*The fabric wraps the mysteries of divine creation, the Ministry Trinity. 1, 2-3 - and 3-2 is one! -

The dual function of the fuel is only trinitarian guaranteed. Each piggyback (2-3) has an indifference (1) for the inevitable requirement. This indifference is always tip the balance of dynamic worlds harmony. Here lies the essence, the hidden creative We-sen the "power-god"! From the *Indifferential zones* of fuel flow pulses to engineering units schöpferi-between our primal power.Each magnetic field pre-interred with its lines of force of this deep mystery. Active power is always the peripheral *outer poles.*The PPP *is based* in the indifferent *middle!*There Vishnu has set building (Kreuz-Symbol!). At each, *bar Magne-th* foregoing can be verified:

To get at the essence of *the* primal power, it would have us succeed in the neutral *middle* zone of material

27

[28] power to give *metropolitan-negative* activity.Here it is again based Hermes Trismegistus: "As above - so below!" Our "energy god" is in its micro-cosmic units dynamically just as fully present as much in the macrocosmic world reference! Material is concentrated energy world of immense stress (condensed te Vital Electricity - congealed light). A kilogram of this fuel represented by the recent work of relativity physics is not less than 90 000 trillion Me-ter/Kilogramm of energy (energy = mass x speed of light speed-squared)!

We speak of a ubiquitous gravitational tationskonstante, even in the microcosmic world-edifice-blocks of matter, atoms and cells. Succeed in the art, therefore, by "differentiation of the indifference" by virtue actively shape indifference zone material, it is the gravitational constant advanced to and capable of energy to work with *psycho-physical* - that is, energy-creative work to be vital!The theory of the *entropy principle* (second heat rate), which-between textbook looked up can be physical all in stating: "The entropy (physical energy deterioration - heat death) has the property in *non-reversible* cyclic processes determines the direction of determining the final temperature raturausgleich to lead

as *"warmth"* never from the colder to warmer location can flow (physical component of the primal power)! "

Our science will present *only* an *entropy* of energies accessible to such a constant in the circuit of different transformations to deteriorate, and when you finally "Kraftstofftod" arrives.- Any energy deteriorating entropy has a certain size that constant, therefore, always-consistent worsening effect, from the heat and the cold-pol is thought rebend above. At each energy

28

[29] transformation process affects the energy shift (for As radium decay!) and we would get in a consistent conclusion to assume that once entering the final Stofftod. The *"God-nature"* (psycho-physical) but works only in *reversible* double-cycle processes and gives birth to such energy back *vital,* the shape of the Ektropie *Lifestyle creating* effective are, therefore "vital growth functions" have (mental component of the primal power!).Such here is the entropy - creatively active zurückgebo-Ren ektropisch, material world as a "perpetual motion" timeless ensure the *psycho-physical!*

"Primordial life force" created a material world, - he Stofftod-force brings life, life force is made once-vital creative (Wischnu!)as indifference and demonstrates new fuel concentration, which in turn leads to entropic Stofftod to ektropisch vital creative energy-to-the who - in the endless flow of time!

gelan The differentiation of material indifference gene we meaning ektropische energy as the nature practically usable Len in the service of dynamic technology to position. The dynamic technique created a magnetic aggregation gat, which consists of a spherical (spherical) - and is built into this ball bar magnet. The bar magnet fixed us the north-south pole of the Kugelma propriate. The magnetic ball, as I said, *hollow* inside.Now, if the built-in bar magnet in his indifferenti-ALZON (bar magnet center in the equatorial zone of the Hohlku-gelmagneten) were cut, we get the ball hollow space-now actually *two* bar magnets and appears to the peripheral ball *north* pole of the sphere center a Stabma-gnet *south* pole , peripheral ball *south* pole but a Stabma gnet-pin faced *north.*

29

[30] This is the problem of differentiation of magnetic indifference (by virtue of material indifference) acetate *dissolved* mainly!

Ball is now established as the *vacuum,* ieMaterial emptied, and an electric capacitor (voltage) is provided, which *a* voltage poten-tial a specific element is grounded on with using the electric potential in the center of the sphere between the two magnetic rod Poland be closed against pin the order can, so we need nurmehr an electro-filling vital that we close the effects cir-ses in the center of the sphere ensures this.The ball-point charge is activated when a *specific* excitation pulse on the *outside* of the peripheral magnetic poles anflutet ball from.

The vital closing manager (Füllmasse!) as a specific shear resistance (ohms) into the hollow central rod is magnetic poles installed and works similar to the consistency rer (binder) of our radio broadcast technology! If this Fritter by the mentioned specific, radio-technical-ten displaying sent short-wave magnetic pulse closed, and in a manner, the electrical voltages (Volt!) activated and can change to be tapped in constant Ampèrefluß technically recoverable from the center of the ball off to drive specific engines, to produce light to achieve heating effects, short-to: to electrify the entire economy.

The initial charging voltage this dynamic elements remain in their Volts to ensure timeless, because the energy consumption bled (Ampèrefluß current amount) immediately from the Erdkraftfeld (see Grounding!) dau is supplemented ernd. Practically speaking: such ele-ment always returns during the charged energy (results from nis "V" by Ohm, see Ohm's law) we have hp electric performance index, *ten,* and then these 10 units removed from the PS always.

The specific magnetic excitation pulse of the dynamic ball of cells is the *original machine,* which

30

[31] on the earth needs to be present only once (analog: Nauen stations), radio-broadcasting technology and has supplied all the elements for the first time ball-charged work to improve performance. On the construction of the original machine will not be discussed in more detail, but

there was only told that it is elements of seven similarly constructed Kugelele, five of which revolve around a sixth fixed center sphere and this rotation of a seventh, non- tear off half of the circular arranged ball ring ball dynamic cell-specific magnetic radiation in order to concentrate on the center sphere. If this is superimposed the ball, then it sends the aforementioned specific short-magnetic waves, which stimulates peripheral in the form of all work elements for energy efficiency. The two ball-fixed cells as anode and cathode pole of the original machine, with their electric charges *equal to* ground *pin.*

The number of dynamic work cells is not restricted and may be in the millions, the technically recoverable ektropisch-made vital electricity is always in the secondary circuit in place of the earth entnom men. The condition of our specific-magnetic transmission technology, however, has yet to create amplification effect plants, which have, in the currently existing experience, the range of 10 km in radius (5 km radial consignment), in which area are able then to address all work elements. Perhaps, the group can reach even larger - at the moment but to be expected with the sen-amps and make them even more dynamic elements built entirely analogous dimensions dar.

If the vital closing head in the ball cells, which are in our dynamo technology all built uniformly closed, then goes into the ball-Vakuas actually an alchemical process to himself, which we here can not describe in detail as these findings are not generally accessible. It should be said is that through our GE-abiding

31

[32] *three conditions:* "technical Indienststel-ment of the vacuum function, differentiation of indifference, vital closure head," biogenetic function of the single, dynamic unit was built, the work makes bioengineered, ieVital electrical, ektropische energy capable of supplying. In the countless bullets flashed the primordial light, secret science as a "hermetic fire-be-record, if the specific-magnetic pulse generators to tender and begins to work the power circuit of Urmaschine. This way we close our dynamic cells that Len up and down the dynamic creation of the single world element, the macro-and microscopic, free energy (space energy) - gleichzuwerten, and powerful material (gym) components two vital-electrical potentials, which by an artificial flash (hermetic fire!) be closed! This "Lightning" (see the ball flash) is the Vitalbin-produces, he designed the ball *vacuum-hot,* and because of this vacuum inside of ball magnet actually *magnetic* vacuum is a can, a "glue-existing magnetism" spoken by it.These calculations rewrite designation only pure energy *state,* which is technically a form of energy supply in mind occurs in which charging of the ball element of the subject made appear.

This voltage responds automatically to each relevant unit of energy extraction and is the *"tipped"* the balance of the dynamo-technical compensation elements are within our sphere!It should have noted that un-sere earth is built exactly the way the ball cell and the Earth's interior is also in an energetic state we circumscribed with "glowing magnetism"-ben. Our dynamic cells get in the engine-management Aktivwerdung its own atmosphere, which is supported by the magnetic ball, and has her life-more-term function, as we have already marked in detail. This work elements provide human *psychophysical*

32

[33] Universal energy. They, vital-energy working units are biotech and as such are also *mentally* acting apparatus.So we have actually quite *magical creations* before us, we produce what the *Vril* the Atlanteans.An abuse of power gained is impossible as long as the "Ur-machine" is in various hands-sponsible is because without pulse-environment by the original machine is no cell able to afford to Ar-operation. The secret of the vitality of our specific binder and capacitors with their filling, described by us with "Elektretenmasse" can not be fathomed, the who, as a possibly violent departure of the spheres will destroy this installation completely automatic.

33
[34]

The psycho-physical worlds, "Perpetuum mobile".

The power structure in their pursuit of all nuclear units load input, the ions and electrons is addressed extensively and attractive. This was already clear to us out in detail. All matter will always evaporate in space. The Bin-making power is only "Vishnu" the preserver of life guaranteed, in the community with "Shiva", a pre-radiant, as an *identity* - apparent physical world allows.

in the material world is a vacuum created specific Fen-is, then the surrounding envelope (atmosphere) Never *press,* as their pursuit force clamping force is directed Tet as extensive.This relative vacuum material is always completely negative active (Siva) is loaded. Each has a powerful vacuum envelope material. This consists of atomic structures. Outside the fuel shell is the atom-knit world order. Now it is in substance-free, with total radiation force charged Vacuum to vital-electrical bond and induction phenomena, such that the wake component of the vacuum, seemingly positive direction, the atomic structure of the environmental substance in the negative electrons dissolve, So to suck, but at least tries to *bind.*Sun works *every* concentric vacuum - and the power vacuum as a "cohesive force" primary attraction, the fuel thus causing *gravity!*

Changing the vacuum motor room wake of his *order voltage* compared to how it takes the form of specific at-atmospheres as "negative activity" throughout phenomenon occurs, then the moment will even know where the balance out-reaching balance this negative active power - whether now

34

[35] as the electron voltage, or as magnetostati sches-Span field of the Earth (atmosphere) means - no more recordings. Then, the energy release in the fuel acting as a result of unilateral surge, are space-force-free and decay, the atomic structure (Radio-Aktivität!). Such a constant, violent, cosmic energy flow is achieved.

The problem we see in the world Stoffvakuas specific structure, the atomic structure of all elements, virtually anywhere in effectiveness. The mysterious and still not in its fundamental nature from the empirical physicists recognized the nucleus is indeed only has justified extended-det, such a space dar. Atoms are always from the purely metaphysical, energetic monads (approximation stage as: ion) Secret Doctrine of the Indian set up. Thus the universal *basic strength* of the whole Weltdynamismus Siva-Vishnu in Ur-binding - - as the basic unit of the mate-intangible creation everywhere "All-love bond, free radiation surrounding!

These monads in their symbol of the negative activi-ties always look *apolar* and yet are already urwesent-Lich energetic binding unit.You make the time being a purely ethereal world and bring in more and more who-boiling energy density at last we know of up physi-cal manifestation. The upholding principle of Vishnu but has been creative in the original unity *fluidal state* with its open distribution supplement Shiva in space bound as the original law and is therefore dynamic world.

We have already noted that the basic units, ie the primordial atoms, appear always charged the same pole, repel, therefore - according to the Basic Law of the apolarity! They are *neither* in *space-extensive power* to think, therefore *bright.*They are *attractive* only by

35

[36] already mentioned Stülpung by their outward as it moved opposite polarity! The summation of all energy-Ur Vakuas as they appear in the atomic structure as a parable as "ion" to make the loading took: "substance-free space"!

This type of vacuole space, matter is well-and substance-free, but ever present force-met. This world-power, as has been often cited, completely indifferent to think acting, so diffuse. *The* parent atom for our atomic physicist, if the energy we monad as the world's dynamic basic force imagine is a *higher binding* compound in dynamic unity.*The nucleus* is a vacuole weight room, loaded with primordial atoms, which is the creative concept of radiation binding Weltdyna-wing extremism.He is a relative microvacuolation identical to the relative Makrovakuole the world empty space and as such has absolutely binding, thus priming! Symbolically it is a closed circle with a central cross-setting Darzu-set as: the effect of each substance relative vacuum, as has often performed as a pure cohesive force unfolding - and causing heavy material, *appealing.*

In the physical atom, we see "quasi negative" energetically *bound* units of "quasi-positive" Atomva Kuol, - that is placed in tension.The negative electron is in itself but only as a dynamic overlay (over-voltage) of the quasi-atomic positive vacuum (Atomkern!) to interpret.

The electrons are *negative-power* units with *positive* force uniformly charged atom empty space.In Urschöp was audit meet-the creative, "All-love impulse" Vishnu such as strong, that is *about dynamic,* that he was creative unity microcosm as in the macrocosm - his identity - based favorably placed, and then speak *out* his essence in weighed compensation nor-time manifested.In this way he stayed on as creative

36

[37] micro-vacuum in the bond units consist of primordial atoms, and was born as a physical counterpoint GE.

The vibration unit was differentiated and substance-EXCLUSIVE "quasi negativity" and "almost positivity" heraufge-introduced, and in the binding, the "negative activity" of the absorbent material force Mikrovakuen (Atomkerne!) extensive power to their original quest - weighed in balance with the material absolutely eccentric (auflösend!) we-lowering vacuum suction power of the original was set. Now, could th the material and physical world of creation take its beginning. The "becoming-world" began the matter. A dynamic *relaxation* from - with energy-charged atoms Ur, macro-cosmic voids (spaces-force) was necessary for this condition.This de-stress in the fuel was then, as I said, always *be weighed* in the *balance* with the absolutely attractive curves, sucking (attractive) forces the vacuole, nega-tive monads.

So there was the outside of the vacuoles "quasi-negative 'primal power set in freistrahlendem efforts to the central vacuum le bound. The Evolution of the material world was on the way! To measure and count were the units of force - always weighed compensation - on to the basics of matter - different atoms aggregated to, and then in spectacular spatial arrangements - which the em-empirical physics-known "space bars" - to be welded together to form *molecules,* which ultimately the specific substances of the materialized world around us her form.That means the Indians in his esoteric teachings to the "exhale the world soul" - Atman (Brahman), - a creation of the world, a Manvantara coming up!

Exhale is synonymous with our dynamic's concept *"developed* tension" of the world-vacuole.

After tremendous time runs, we are the CURRENT-term period of creation of the so-called *"involution"* reaches beyond what is visible enough, documented

37

[38], is that the planet Uranus, the Significator of technology and electricity, in 1781 by astronomers men Herschel was discovered - since then the technical He runge-ties of humanity in the enormous growth understood, and to us the mystery of the tively becoming radioactive substances revealed by Curie. The *Evo-lution* has taken its beginning, the time has already occurred, where all material has become contaminated again, rather, *reflects back* in the Atman, is therefore energetically! Such breathes the creative principle Shiva-Vishnu (Atman, Brahman) everything material that has become again. The matter is radiantly free, the material world will disappear into the purely spiritual, to be breathed again - to be re-created. Of course, should still have up to the dawn of EO *unit* that *condition,* the Indians with *"Pralaya,"* the Gnostics with the *"Nunc Stans"* means pass away.At this state of *"absolute rest"* and substance-secular "non-existence" is followed immediately in a newly-Manvantara it!A new creation of the world but need not necessarily be identical to the present. She may have changed again a very different dynamic conditions-res appearance with unimaginable Erlebnismöglichkei-th rational beings living physical Ergee *then* the ben.

And now a major factor in world dynamism reaches for viewing!

The breath *from* Atman, which is therefore 'non-contact-"of" Urkraftprinzips "is analogous to the *development* of tension-Kraftvakuolen monad and can only be in its micro-cosmic" fuel units, "which will cost all-in mix of Makrovakuole are included, who thought, the (relevant is all of the previous ver-sions you can!).

This exhalation due but *automatically* inconceivable long in all established relative micro-vakuas that we associate with "absolute radiation, monad, Shiva-Vishnu, Prana or Atman" can be equated, the *va-ables*

38

[39] the tension of all the substances manifest rela-tive microvacuolation and the so-called fuel-pressure environment will thus also vary. The negative activi-ties of the bipolar material bond must be in their power to the modified vacuum suction customize their Zen tralkerne, ie: declaring them off-energy units - because the atomic unit is disrupted in dynamic equilibrium. Thus, these *excess* negative *ven-free* bond units and fuel radioactive, energetically, beaming.

As magnificent final apotheosis us was allowed the following picture and led the world dynamic, psycho-physical PERP tuum mobile readers in mind!

Atman exhales, the creation begins - the atomic structure are dynamically balanced with the lashings (electric nensphären) specific Stoffvakuas, so set in their exact Force measurement. By the symbol "exhale" marked *omnipotence,* which only a single constant can be thought of but yes, is from the microcosmic point of reference to *"outside"* as it moved.Then breaks the time where the Ge-been as a result of the creation of re-entrant "Raumvakuolen-voltage positive pressure" when Einat mungsakt-sequestration from the beam is *free.*This pressure is easily conceivable in other versions-bar. Indeed, if we force *constant* world *outside,* we retroactively make, must be *within* the established limits relative space vacuum, a force *under* tension-ten entries.Now keep this in balance but the set voltage forces the electrons in the atomic structure of these variable environmental pressure only up to the time re-entrant *vacuum over pressure* (inhalation) balance.In the period following the damage being of individual elements will to resist in that their atoms then open distribution, *dynamically* effective.And that happens with the *last* logical *first* become members, as *they* have in

39

[40], their energy mostly *trussed* Kernvakuolen the largest electron-voltages for the purpose of maintaining the dynamic equilibrium obtained.Is the lowest pressure achieved spoken-chen figuratively has Atman exhale completely, then the *whole* of atomic microstructures bipolar created material world-as a result of the occurring voltage overpressure of their electrons - in consideration contraction of the resulting from this environmental pressure equalize again, and power is diffuse.Thus the whole matter dematerialized world in progressive proportions. Atman draws his material creation into the space vacuum, which is again slowly with his uniform, energetic monads framed on back. *He breathes!*

At the conclusion must, therefore, the oldest elements with very low voltage electrons relax, hydrogen and helium - energize! This is consistent with the empirical research also agreed that on the world with parties in Urnebeln Werd is "glowing hydrogen (hermetic fire) creation or establishment always *first* been identified in.Here is now to be noted that that wonderful knowledge of Hermes Trismegistus: «As above - so un-ten" also bezgl The variable voltage is vacuum world. In the Kernvakuolen of earth, atoms, cells, etc.-between men's always analogous relations. All creative vacuum to fabric voids correspond with each other and build-en the material creation - "as above so below" - in such a way that keep their forces all fuel-Shem in dynamic balance. Voltage changes from the same macro-cosmic Raumvakuole in the micro-cosmic material voids, the atoms and so on, always on, rather, they remain *the same!*

The radioactivity of the elements on our planet has already been used (see Radium), Atman assumes the material world-view back enough, - he *breathes!*

The Weltraumvakuole is recharged by the fuel liberated omnipotence, representing an over-voltage

40'

[41] is equivalent to the atomic structure. Matter is decompressed (because spans), so bright, we join the after-the era of the "bright Weltdynamismus"! From these findings, the dynamic Born future technology and the mysterious

the presence of the ancient Atlanteans humanity reproduced-done! Inexhaustible energy sources are in fact the human race soon available.

41
[42]

Ethical requirements and "radiant humanity."

Now we get to the *ethical* importance of space previously declared *Vril* force problem!

Immense dangers threatening the entire human race today-te, if the achievements of a dynamic technology driven abuse! The culture of the world say, adhere to the traditions of the Atlanteans is Geheimwis-sciences also from the abused "Vrilkraft" perished. has "Radiant Technology" bright people "necessarily implied!

We stress that in our proclamations on the OEF-lic and over again. What we now introduce in the coming radiant humanity?

Vishnu-Siva is bound All-Radiation love and timeless design, in short, is constant *evolution!*At *All-love* bright to be the next must therefore mankind, the gift of the gods "radiation-lumbar machine" in order to be able to partake.The destruction tion will must necessarily be overcome, so we speak of "new people discipline" and "organizational hedging"! God is in itself *only* creative love.The universal spirit shines *forever* bound in *love!*Only in such a large world is becoming possible.

Today, man *is liable* in deep selfishness, even he, "and" kindness "to give supposedly" love if.He asks, not usually with such *"love transactions,"* which "good" *it* does come out?If he thinks *very* noble, then at least he is tormented by *the* thought *that* he "Gu-th" by "bad" may *not* be repaid!

42

[43] This will be *different!*The man was not "good" and "love" of personal advantage because he would "finish" and "love" completely irradiate these ideas to be built-half. Beam-man so he will slowly release - and ripe for the coming superman. He believed not that it selfless gift with no *fruit* such! Gorgeous wreaths are wrapped him in the realm of the *spirit!*The *big* "giver" is the gi-mammoth *"recipient"* - to the creative highly favored!

Transcendental effect possibilities are his own.

Is man as a spiritual being quite the stuff connected to his earthly body, then he is like a joyless imprisoned in gloomy dungeons, Square to Square umtürmt him, light and sun are rarely visited. So he builds himself but first an airy cage, here it is probably still limits to freedom, but radiation-calendar day is then at his home!

He donate because light, *shine* - so be Leibge to-open can add the cosmic power currents - and the cell body to create it, - *bars* - far will his earthly dwelling.The gaol ashlar but - be destroyed!

Because all *material life* is *"Frozen Love",* sung by the great seer *Hebbel,* in his wonderful Ge-tight "The poet's testament."

Intellectual life is brilliant but loving the circumference of the whole creation, creative *fire!*The leakage in the Universal Soul, in the *"Pleroma"* people can rule as "microcosm" find the - in the "Makrokos-mos"!He is then everywhere - and nowhere, when *all boundaries* have fallen!A bright "look" is granted to him. His knowledge is *"intuition",* - he enriched himself with no more intellectually meaningful abstractions from the material world!

For now it is but - are modest!

43

[44] A *way* must be systematically reviewed so that a large goal is achievable!First is the "fact" of *go-volition* set, advanced boldly!*entrepreneurial* thinking to train *Plasti-going,* man another start.It vividly learn *"love"* think in solemn contemplation, he becomes the *"magic lovers"!*Now he climbs from grade to grade until he learns to radiate in the "Pleroma" - in "Love voltage wealth."

The ultimate objective his!

but more *ground-directed* his first *practice!*We are, after all the material bound to *have* and to create building.The ethical side of the mind-Weltdynamismus slowly kick into action. Radiation - from the confinement means is material!

"Will" is man for the, for off heraustre-border "Love Atman," *he will-power* implementation *deed,* then be-he rides a *relaxing* environment pressure and Creator-tion of liberty, the more so as his "body "(combined space) evacuated - (loosened material!)to the flow channel cosmic primal force and spiritual love is *contaminated* (space power).*He sucks on Vital electricity!*

The same extent as it is so, he gets the undreamt-of back. This is precisely the mystery of the Uranian radiation coming people. *Easily* accessible and is *essential* spirit of the envelope, his sham of material body. - But he is transformed into a completely positive creative spirit power that can do what she wants and knows the truth of things.

Deception of the senses is all around him, he as a *spirit being-alone unit* is a positive force is to "champion" of the dynamic between the universe - formed in solar systems and atomic microstructure!

Ways knows most ancient esoteric Wei-stum to unfold it to those bright-schöpferi between God and man. These paths, he falls in confidence believing

[45] to *strengthen* his gods, he is *free* to force material from bonds!

"Fact" - alone can save us! Not sleepy-dream now and expectation of future assistance from the *outside.*Helps the man *himself,* so *God* help him, but he rests in God, he can *find* him if he really only *looks!*

As a *flame* infected, the way it illuminates the.And rewarding *Sonnenfanal* he can only be *himself,* for himself obsessively "do" - that seek to *do the* same *IT!*Nothing can be paid! Man *himself* must *do* the deed!And this great deed states: "All-Loving radiate."

If he *finds* the "universal spirit", then he sees him *only* as *"light"* - *light without* reserve - absolute love rays!

"Indeed" stood over the gates of the Temple of all the criteria mystic cults, *creative* act must also give the *"word"* will.And the word of words is called "universal love"!

Christ the Logos gave us the word design-Tet creative, he has just *lived!"For the word is flesh GE was!"*

Sun unfolding man also the word of Christ in the creative, and will Tatsetzer, logos let the creative in itself, and will Tatsetzer, let the logo to *shine* in - to be able to radiate - "pure love - no liability"!

Attitude is *always* an evil, - teaches the "Bhagavad Gita," the "Bible" of the ancient Indians.Therefore, the human-like in *anything* like, not even at the "fact", then *"Nirvana,"* the "being in the bonded free love radiation Atman" - he Endheimstatt be blessed!Such as love charms but he will "cross-bearer"! The "Ankh-cross" has always been the symbol of wills absolutely positive. *This* cross he'll take pride in himself, he was regarded as *the highest* religious award, given by the *universal spirit* itself!

Now is the beginning made the *Tatsetzung - because time is here!*

[46]

Methods and aims.

Since the cosmic primal force as soon as the Ger-man people want to adopt must go out to find who-the ways to make the installation of the dynamic tech-enabling technology.

From what has been said, can be seen clearly that this is not a new "invention" in the usual sense, but about a world-shaking Affairs nities helps people to come Naturbeherr final research. Where the Vril power in irresponsible hands, it is outrageous in the balance!

In possession of a capitalist interest group, which is primal force for the purpose of their "financial strengthening" would operate, could this huge factor *throughout* the nation be to the curse.

The utilization of the primal power ushers in a whole new era of mankind, and gives their rulers an invincible power. *This power* can not be shipped existing economic organizations, unless there is a *protection* that prevents their abuse.National patents are not in question, for reasons to which every judicious man must admit from the outset. Patents *protect* any invention well in *monetary matters,* but not guarantee the *confidentiality of technical constructions.*

The secret of the vital tie (coherer), the specific "glowing magnetism" the balls he testifies-in, must necessarily be guaranteed, and may make after-the *'Ur-machine'* hands never be given to irresponsible.As a weapon of war would be the elemental force unforeseen adjustable

46

[47] wreak destruction. The pursuit of power does exist-but still tantamount to test each technical innovation on their suitability for military purposes. The primal power to the German people only redound to the *blessing!*It creates opportunities undreamt-type structure and ensures the German people a new future, which will be free from all economic troubles and worries.

For economically and technically brings the new force a perfect swing, a revaluation of all values! It is hardly a machine, hardly a technical apparatus that is not affected in its Wirkungswei-se and economy of the new technology, or even put out of course. Electrical Großkraftwer-ke, complicated turbine plants and the like Be superfluous-sig! The entire fuel application, such as coal, etc. winnung-Erdölge is unnecessarily slow. This results in naturally consequences for the owners appreciate this earth. The capitalist economy is on the Up-bringing of the primal power of no real interest to the extent it is a question of power to protect *its own* economy.It should not therefore be expected that the elemental force those making political business community is vital, as they inevitably best redeployment of existing power relations with the result.

If the German people as a whole does not occur behind our re-claims, the introduction of the dynamic technique will probably still have to wait quite a long time coming. We ourselves are not interested in whether the Urmaschine today - or indeed in the coming decades will be in action-set speed, as long as the unconditional protection of the same appears to be ensured. A new Germany wants to crack - with completely new Economic and Commu-nity structures! Responsible people need to prevent any abuse of Vrilkraft, otherwise would be to present the most terrible.

47

[48] The new technique is dynamic in the future, electric locomotives and cars can be produced without expensive fixtures and operate by switching to the atmospheric voltage power everywhere wealthy gene. Precondition is the installation of a sufficient number of amplification systems (stations) that transmit the given by the Urmaschine specific "magnetic pulse" on the dynamic ball elements. New passenger vehicles with magneto-static drive and control, which are very crash and colliding sure you can at a fraction of the cost of today's air-tool built in - and be operated without extensive training of all-male.

The amplification systems are by their wechselsei-term connection to the area covered by them a power network of the most powerful effect. They are used to count-celled dynamic elements that are distributed across the country, encouraging, and with the Urmaschine dynamically bind VER. Since

Vital electricity in unlimited size available, it can be gone, soil (soil), the vital electrical to *fertilize,* ieVital *to stimulate.*In view of these two crops per year can be achieved. Further, since the centers with the help of their very strong and appropriately voted off voltage, the magnetostatic field of the Earth (atmosphere) are able to influence, the human health and the *weather* at its wool can make NEN.The illumination of the houses and villages is un-dependent on foreign power plants. Every house, every municipality Ge, each operation produces the needed electricity even when they are in possession of specific elements charged dynamo!

As the vital electricity is actually winnable *free,* can be whole economy down to its last details electrify.This in turn that the heating and lighting of homes, only in *this* way takes longer.The telephone-

48

[49] and remote image is also being redesigned. The personal telephone, specifically *tailored,* he allows, at any time the connection among the people if they want to listen to alone, regardless of where they currently reside.The transfer of images and pre-transitions of any kind to any distance, appears likewise assured. The new telephone and Fernbildappa rate can be taken anywhere and immediately put into operation.

Social, ethical likely that a new technology in our gan-zen people affect fundamental changes. It will be possible in future to the state to build because of its new monopoly rents, taxes and duties and also to guarantee every citizen housing, food and clothing and adequate pensions pets. In return, work tasks, the whole of *every* citizen, however, *that* require him to his profession and his orientation in the new state to come under.Work supports are unnecessary, as there is work in abundance. Work is raised to the moral duty of every citizen and who does not work, must bear the consequences of that themselves. Since the activity in mines is no longer necessary, which wears down our workers early, here is a decent and health-sary changes initiated by the elemental force.

The working man is his true being-there intended to be culture creators, in growing proportions supplied and prepared the ground for a higher ethic. There is no doubt that was born through the new big ideas, from which the dynamic technology, religion and justice are largely influenced. There should never be overlooked here, the it is not a new *physical* energy, but is in fact-but the *"psycho-physical elemental force"* is that in coming days, nothing to überbie th is through.

49

[50] breaks also politically and culturally to a new time! Here it is again clearly stated that it is not thought absolutely the Dynamo technology ir-gendwie *forcibly* installed in the German state.Only in wohlerwogenem degradation of existing conditions and long-mon *evolutionary* installation of the new, is the most economical conversion of the German people made.We are always of good will, with *all the* insightful factors and personalities of the German economy menzuarbeiten together, only we can offer our ethical research requirements under no circumstances withdraw from.The primal power to serve the people whole, and is some power to the enjoyment of group will *not* answer!The possibility of our local industry back largely to decentralize the basis and the small manufacturer, so every craftsman competitive again to do with the large industry is always given and can be so the more untenable expectant problem of our large industrial and giant cities with destroying their culture-border effects of a solution out.

Working people can in healthy, village-like settlements surrounding soil around the resulting work be done constantly. Thus it is the wild goings-tags and the corrosive influence of class struggle and encouraged family life caught on home turf in the best sense. Care centers shear German art and German culture can be everywhere and launch using the continuously maintained by the new power gained nenen-agent.

The new era requires *new* people!

Previous speakers have already said enough. These new people can not be brought up from today to tomorrow. If it therefore it *alone,* would, incorporation would be the possibilities of dynamic technology in the coming decades, where the first place.After

50

[51] but the German people can hardly wait long enough, and our technology would actually be made tomorrow in the service of the people's welfare, here is an attempt, all under on current assumptions and gene conditions suffering educate people and to that cause applications to take advantage of our position somehow. It has just put before a large mass to hop to create a basis for negotiations, which are made in the currently existing power groups GE meinnutzbringende agreements can NEN.

These negotiations should be in as short a time to lead us goals, and legislative protection of *Urmaschine* furnish!The *enjoyment* of the primal power each *state* as it has held the national community!Such are the *State* in the hand, where resources are all to the deplorable conditions as quickly as possible herauszu-get out.The entire German people have now to de-cide whether it wants the blessings of the primal power.

lead, it would be for our advance guides really in the best interest of the present state power, all roads, which the whole quickly as the goal would be to forge immediately and we stress again that we ensure the protection of Urmaschine always are ready now with all the competent bodies in touch connect. Is this protection as VER and legislative guarantees, it can be started with the installation of the dynamic technology and access to the Urmaschine Constellations. In this regard, there is a page from our up to the last elaborate installation program, which can get to the place appointed immediately submitted.

The upcoming technology is also likely that great over bridge (pontifex maximus) between religion and science are able to beat, which must lead to the final reconciliation of these two opposites. *This* dream of humanity as a millennia-old quest of all

51

[52] insightful, - creative design-do people can be realized in *near future!*The "energetic-tion God" is with his blessing-giving effects on Earth to be visible everywhere, and not merely *abstract* notion of religious dogma be a.The Vital electricity as the *life energy,* is well physically, a new era in human development leads.What ancient Romans, *"JOHNSON"* (kind Hausgei-star) symbolically understood her to us comes in the form of the primal power-tangible elements in mind!The *psychological* component of the Vril - as vital, creative function - guaranteed us the inevitable initiation of a new ethics and morality.

God "wills" in all his power and glory - in the spirit of "open end" elemental force "- with his sons the people" as.So it will fulfill what we were predicted many centuries ago that "kiss when heaven and earth, (berühren!) the kingdom of God is born on earth "- This mysterious prophecy has been realized by the dynamic technique already, as macro-cosmic, dynamic effects - appear in our dynamic microcosm mixing elements!

Prevailing economic ills violent drive slowly to disaster! The need is on the rise and there is no time to lose to banish the specter of imminent collapse immediately!

It must be every enlightened Germans realized that our efforts are to be taken completely seriously and we will not go out on strike from our discovery of personal capital. With low reflection you will probably have to admit that we do so of humanity has no bluff - and lacks any Ver-leumdern any chance for us to impute selfish, self-serving motives. Bluff is always based on fraud - and is intended by any dizziness always somehow 'money GE makes "are! We, however, no monetary receivables, on the contrary, we reject any offer "for the purpose of *industrial application"*

52

[53] from the primal power and principle, our discovery of the German people as a *gift!More* altruism may well be required.We are concerned Vril a *blessing* of the entire globe to bring back the humanity that and make it subservient to.

As a German, but we consider it our duty before company, achievements, "German spirit" as the only *first-German reconstruction* to provide!As a result, will in due time, the Vril but of all humanity and serve the great reconciliation *of all* nations and peoples to realize it!

Reich Working Group, "The Germany".

A large helping Tatgemeinschaft comes up on the German Reich!

The creative person is initiated - and "knowledge-send" wise practical ways for the practical education of the Uranian radiation people!

The time of Uraniden will crack! - -

In all cities in Germany are working together and created cells, these cells in the capital to a central unit. Every German we wanted to cooperate and *no* German feeler as it appears too small!

The community itself is completely *apolitical* and *impartial* and work creatively within the meaning of constant *För-ment* of *all religions* at the *Tatguten* Up bringing of the Superman.

Every "seeker" without distinction of sex or social position and we welcome contact our central office in Berlin W 57, Pallas Street 7 / 1.

Now we present you with the tatfördernde brotherly hand to the spiritual covenant and do like a *"Servant"* to *work* with you creating construction!

So we all just as *"Servant"* of Tatge-nity to be understood that the service "of the most sublime of all radiant servants" - the *universal spirit* - are.

Now growing in the human breast sown Tatkorn root drifting to the "fact-world tree", which - so the omnipotence will - soon a great blessing Tatgemeinschaft donating over-shadowed! radiates on our banners in blazing light lettering, the "fact-Rune" and directs us to the victory of the noble nature-controlling Uraniden!

54

And that's our slogan:

"By fact-radiation - - free!"

The bright-willing man but the maintenance of radiant, "primordial power cells!"

Thus, in the near future *reality,* countless *"Su-reaching"* as a sacred idea in deep breast *cherish* what!

And *God* is *spirit,* radiation is creative power!But above all: "All forgiving - because of everything knowing love!"
